Profile

Computer Engineer with **4+ years of experience** as a Full Stack Developer. **My key strengths** are **backend development, database optimization (SQL Server, PostgreSQL, MySQL)** with advanced use of **stored procedures, triggers, and indexing, stabilization of legacy systems without documentation through reverse engineering**, and **designing REST APIs** for integration with external services (e-invoicing, payment gateways). I have worked with **PowerBuilder** (DataWindow, client/server) in proof-of-concept projects involving multiple distributed databases. I've led technical teams, reduced critical bugs by **70%** and improved query performance from 8 minutes to under 5 seconds (**98.96%**).

Key Achievements

70%

Fewer critical bugs

98.96%

Experience

Odoo Developer Nov 2025 – Feb 2026
Projects for multiple clients

- Developed custom modules in **Python/PostgreSQL** for logistics, sales, and manufacturing.
- Integrated accounting, inventory, and e-invoicing systems.
- Optimized PostgreSQL queries achieving **-40% load time** in financial reports.
- Diagnosed and fixed bugs in legacy systems with no documentation.

- Python
- PostgreSQL
- APIs

Backend Developer & Technical Lead Oct 2024 – Nov 2025
DrocerCA

- **Reverse engineering and stabilization of a legacy ERP (30+ years of evolution):** Led the rescue of **ProteoERP**, a critical system with no documentation and over **30 years of continuous development (since 1995)**. Applied **reverse engineering** techniques to map business logic, data structures, and module dependencies in a system with multiple historical layers. Documented the system from scratch and stabilized its operation, reducing **critical bugs by 70%** and improving overall performance by **40%**.
- **Extreme database optimization (SQL Server):** Designed and implemented a comprehensive optimization strategy including **strategic indexing, refactoring of complex queries, and advanced use of stored procedures and triggers** in a system with decades of accumulated data. Reduced financial report response times from **8 minutes to under 5 seconds (98.96% improvement)**. Also worked with **3 databases on different servers**, unifying distributed queries to consolidate real-time information.
- **Digital invoicing API development:** Designed and implemented a **REST API** for generating and sending electronic invoices, integrating ERP business logic with **SENIAT** standards. The API handled data validation, tax calculation (VAT, ISLR, IGTF), XML generation, and communication with e-invoicing services. This fully automated the process, reducing manual errors and accelerating monthly closings.
- **PowerBuilder Proof of Concept (DataWindow & Client/Server):** Evaluated the feasibility of PowerBuilder to unify queries across multiple databases. Developed a **billing module proof of concept** using **DataWindow** for visual data management and client/server logic. This experience gave me a deep understanding of PowerBuilder architecture, DataWindow management, and PowerScript language, though it wasn't eventually implemented in production.
- **Structural analysis and debugging of complex systems:** Conducted a thorough analysis of the ERP's structure, identifying bottlenecks, hidden dependencies, and obsolete code in a system with decades of patches and modifications. Used **debugging** techniques at both database and application level to identify and fix errors in a system with no documentation.

- 30+ years
- SQL Server
- Triggers
- REST APIs
- PowerBuilder
- Reverse Engineering

Web Master / SEO Jan 2023 – Dec 2023
Qualitas Plaza · Marketing Standard

- Improved **Core Web Vitals** by **40%** through caching, minification and asset optimization.
- Technical management of multiple high-traffic websites, ensuring scalability and maintenance.

- WordPress
- SEO
- Performance

Full Stack Developer Oct 2020 – Sep 2022
Liceo Bolivariano de Ejido

- Built an academic management system from scratch (PHP/MySQL) for **2,000+ users** across 2 parallel institutions.
- Implemented enrollment, grades, automated report cards and dashboards with statistical metrics.
- Designed secure architecture with role-based access control (RBAC).

- PHP
- MySQL
- JavaScript

Education

Computer Engineering
UPTM Kléber Ramírez
Jan 2022 – Apr 2024

Associate Degree in Computer Science
UPTM Kléber Ramírez
Jun 2018 – Dec 2021

High School Diploma (Science)
Unidad Educativa Julio César Dávila
2016
